

CUSTOMER SUPPORT SYSTEM

Sales Marketing Presentation

PROBLEM STATEMENT

Customer support systems are often slow and require manual handling of queries.

There is a need for an intelligent system that can:

- Automatically respond to user queries
- Track issues using tickets
- Allow admin monitoring and control

OBJECTIVES

- To build a scalable backend using Spring Boot
- To integrate AI for intelligent response generation
- To handle user requests efficiently through APIs
- To connect and manage data using a database
- To improve automation and reduce manual effort

PROPOSED SYSTEM

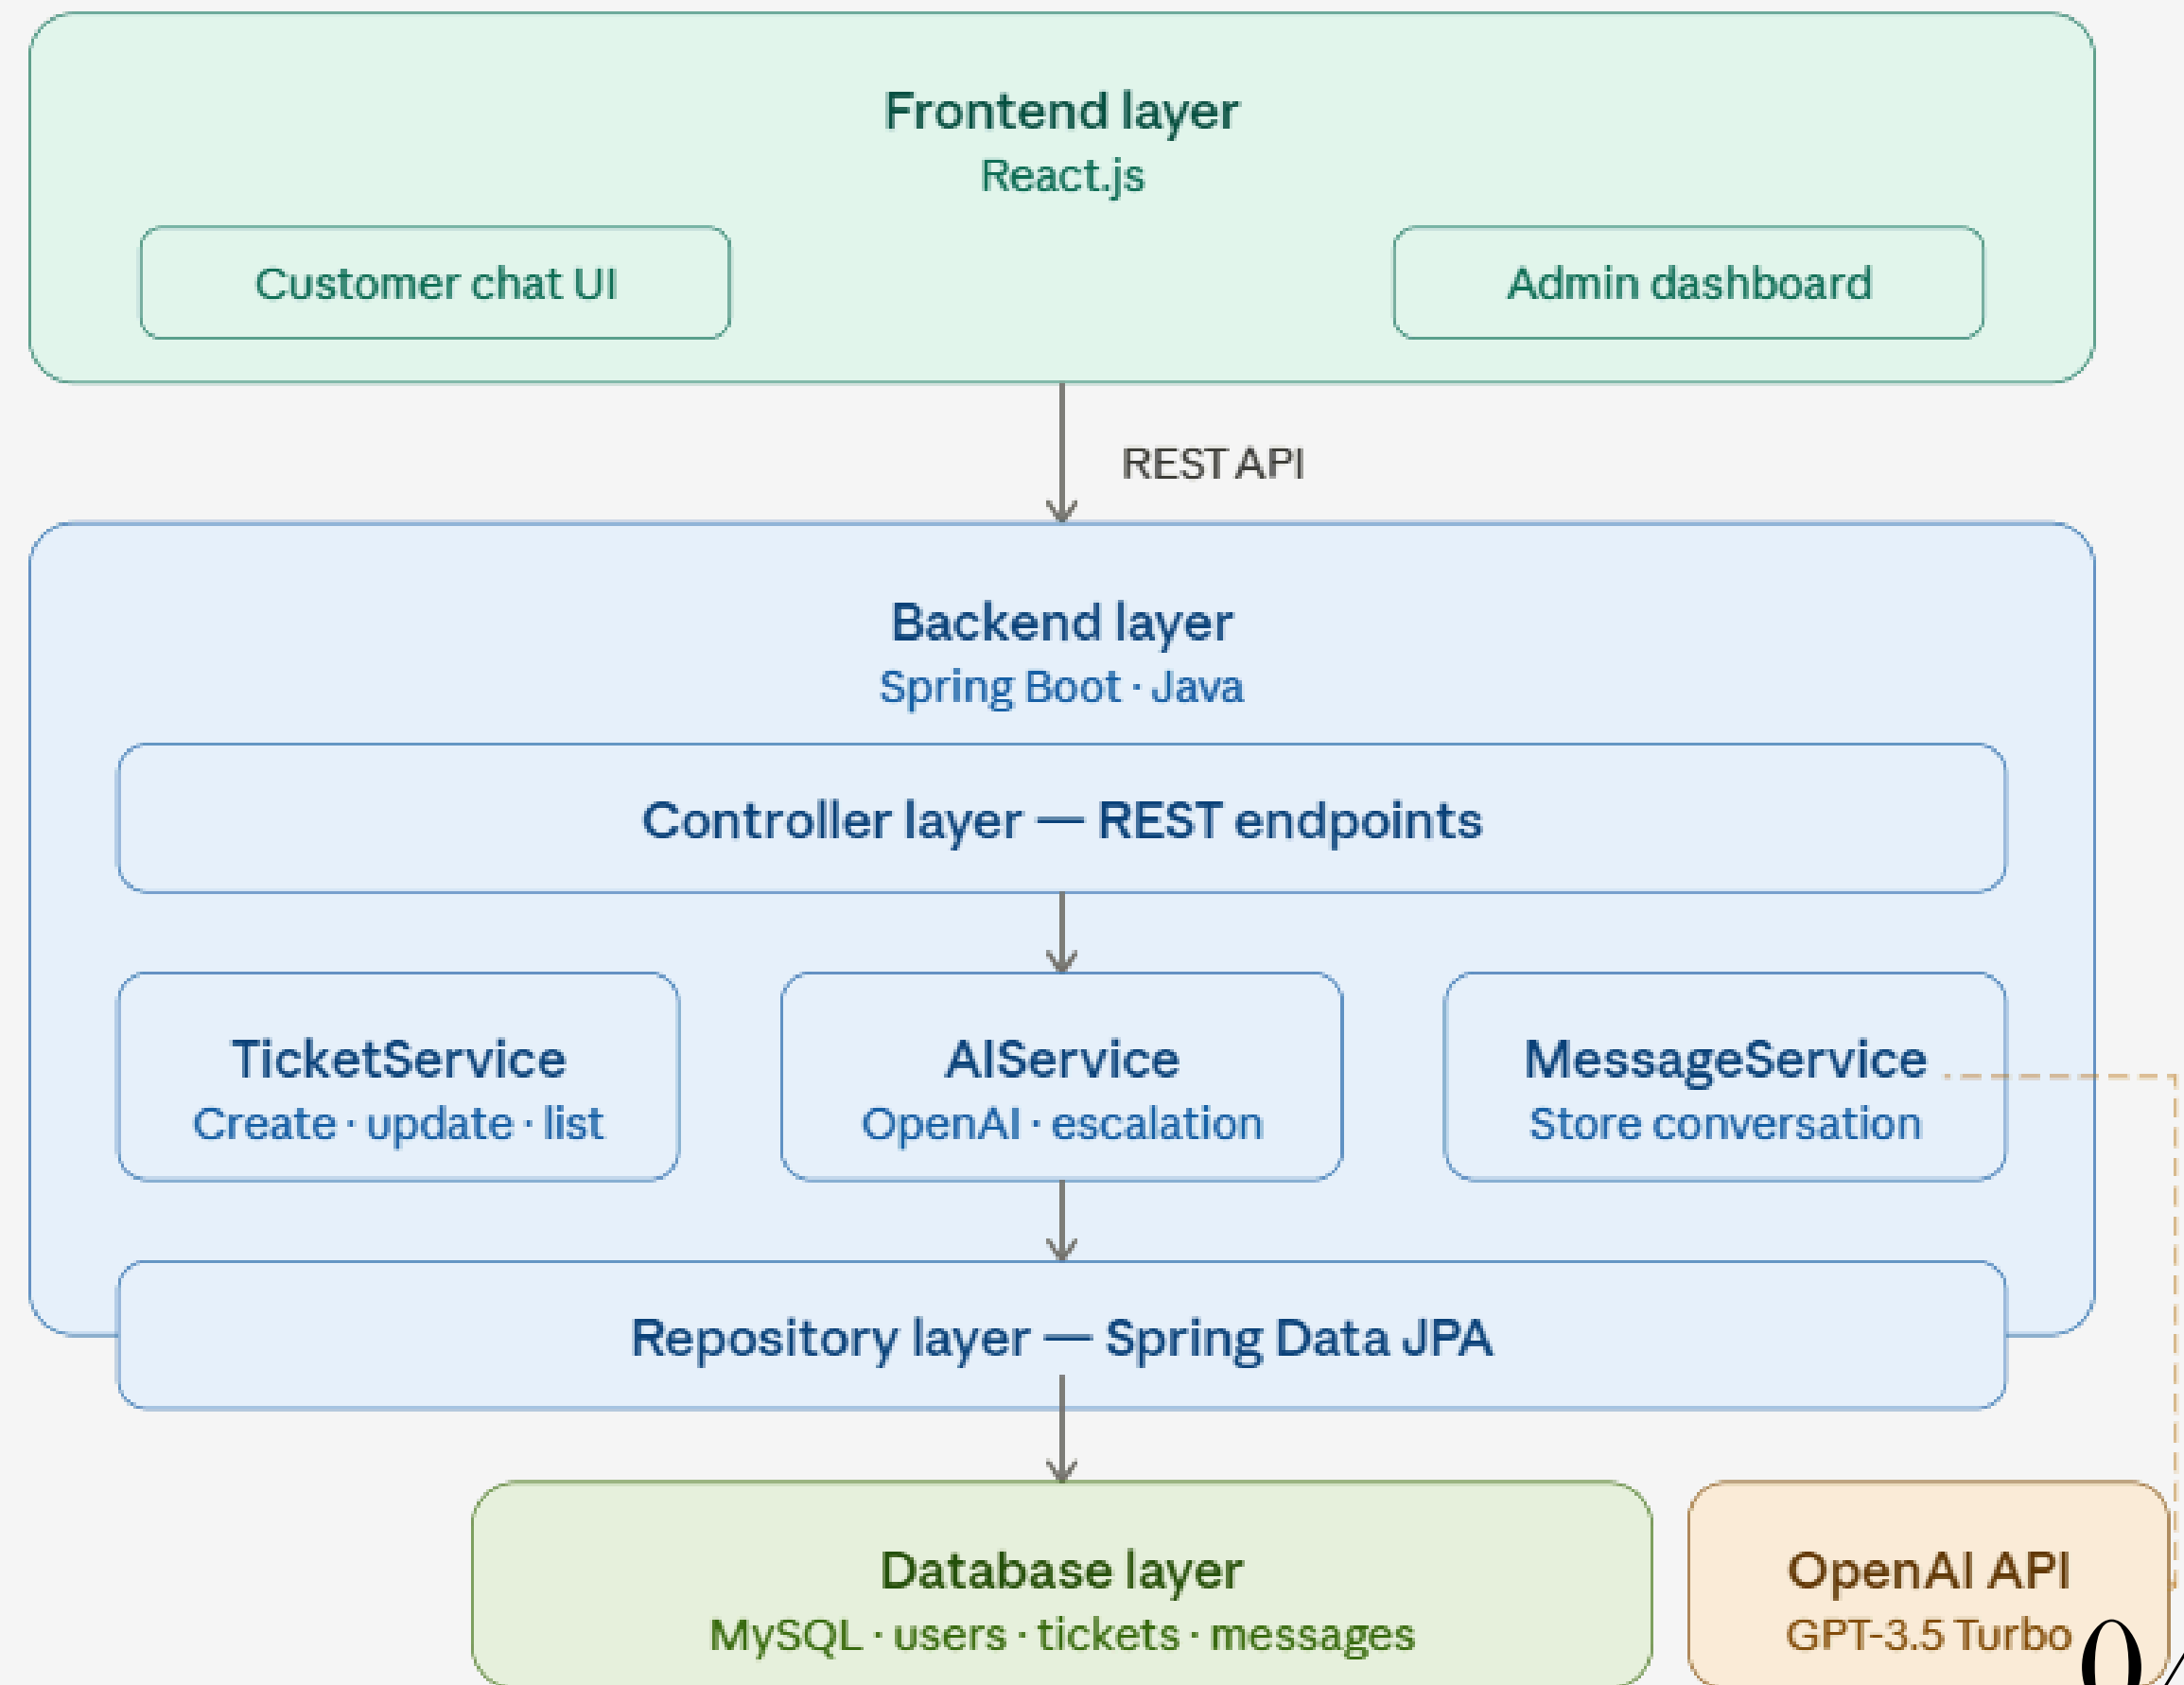

We developed a Service AI system that:

- Accepts user queries
- Generates AI-based responses
- Creates and manages support tickets
- Provides admin dashboard for monitoring

FUTURE ENHANCEMENT

- AI model improvement for more accurate and context-aware responses
- Real-time chat using WebSockets for instant communication
- User authentication and role-based access control
- Advanced analytics dashboard for insights and reporting
- Multi-language support for global usability
- Integration with email/SMS notifications
- Cloud deployment for scalability and performance

Thank you
